FreeBSD Glossary

This glossary contains terms and acronyms used within the FreeBSD community and documentation.

A

ACL	## Access Control List .
ACPI	## Advanced Configuration and Power Interface .
AMD	## Automatic Mount Daemon .
AML	## ACPI Machine Language .
API	## Application Programming Interface .
APIC	## Advanced Programmable Interrupt Controller .
APM	## Advanced Power Management .
APOP	## Authenticated Post Office Protocol .
ASL	## ACPI Source Language .
ATA	## Advanced Technology Attachment .
ATM	## Asynchronous Transfer Mode .
ACPI Machine Language	Pseudocode, interpreted by a virtual machine within an ACPI-compliant operating system, providing a layer between the underlying hardware and the documented interface presented to the OS.
ACPI Source Language	The programming language AML is written in.
Access Control List	
Advanced Configuration and Power Interface	A specification which provides an abstraction of the interface the hardware presents to the operating system, so that the operating system should need to know nothing about the underlying hardware to make the most of it. ACPI evolves and supercedes the functionality provided previously by APM, PNPBIOS and other technologies, and provides facilities for controlling power consumption,

		machine suspension, device enabling and disabling, etc.
Application Interface	Programming	A set of procedures, protocols and tools that specify the canonical interaction of one or more program parts; how, when and why they do work together, and what data they share or operate on.
Advanced Power Management		
Advanced Interrupt Controller	Programmable	
Advanced Attachment	Technology	
Asynchronous Transfer Mode		
Authenticated Protocol	Post Office	
Automatic Mount Daemon		A daemon that automatically mounts a filesystem when a file or directory within that filesystem is accessed.

B

BIND	## Berkeley Internet Name Domain .
BIOS	## Basic Input/Output System .
BSD	## Berkeley Software Distribution .
Basic Input/Output System	The definition of BIOS depends a bit on the context. Some people refer to it as the ROM chip with a basic set of routines to provide an interface between software and hardware. Others refer to it as the set of routines contained in the chip that help in bootstrapping the system. Some might also refer to it as the screen used to configure the bootstrapping process. The BIOS is PC-specific but other systems have something similar.
Berkeley Internet Name Domain	An implementation of the DNS protocols.
Berkeley Software Distribution	### U.C. Berkeley # Computer Systems Research Group(CSRG) ##### AT&T's 32V UNIX® # ##FreeBSD ### CSRG #####

Bikeshed Building

A phenomenon whereby many people will give an opinion on an uncomplicated topic, whilst a complex topic receives little or no discussion. See the [FAQ](#) for the origin of the term.

C

CD

[Carrier Detect](#).

CHAP

[Challenge Handshake Authentication Protocol](#).

CLIP

[Classical IP over ATM](#).

COFF

[Common Object File Format](#).

CPU

[Central Processing Unit](#).

CTS

[Clear To Send](#).

CVS

[Concurrent Versions System](#).

Carrier Detect

An RS232C signal indicating that a carrier has been detected.

Central Processing Unit

Also known as the processor. This is the brain of the computer where all calculations take place. There are a number of different architectures with different instruction sets. Among the more well-known are the Intel-x86 and derivatives, Sun SPARC, PowerPC, and Alpha.

Challenge Handshake
Authentication Protocol

Classical IP over ATM

Clear To Send

An RS232C signal giving the remote system permission to send data.

Common Object File Format

Concurrent Versions System

D

DAC

[Discretionary Access Control](#).

DDB

[Debugger](#).

DES		## Data Encryption Standard .
DHCP		## Dynamic Host Configuration Protocol .
DNS		## Domain Name System .
DSDT		## Differentiated System Description Table .
DSR		## Data Set Ready .
DTR		## Data Terminal Ready .
DVMRP		## Distance-Vector Multicast Routing Protocol .
Discretionary Access Control		
Data Encryption Standard		
Data Set Ready		
Data Terminal Ready		
Debugger		
Differentiated Description Table	System	
Distance-Vector Routing Protocol	Multicast	
Domain Name System		The system that converts humanly readable hostnames (i.e., mail.example.net) to Internet addresses and vice versa.
Dynamic Host Configuration Protocol		A protocol that dynamically assigns IP addresses to a computer (host) when it requests one from the server. The address assignment is called a “lease”.

E

ECOFF	## Extended COFF .
ELF	## Executable and Linking Format .
ESP	## Encapsulated Security Payload .
Encapsulated Security Payload	
Executable and Linking Format	

Extended COFF

F

FADT ## Fixed ACPI Description Table.

FAT ## File Allocation Table.

FAT16 ## File Allocation Table (16-bit).

FTP ## File Transfer Protocol.

File Allocation Table

File Allocation Table (16-bit)

File Transfer Protocol	A member of the family of high-level protocols implemented on top of TCP which can be used to transfer files over a TCP/IP network.
------------------------	---

Fixed ACPI Description Table

G

GUI ## Graphical User Interface.

Giant The name of a mutual exclusion mechanism (a `sleep_mutex`) that protects a large set of kernel resources. Although a simple locking mechanism was adequate in the days where a machine might have only a few dozen processes, one networking card, and certainly only one processor, in current times it is an unacceptable performance bottleneck. FreeBSD developers are actively working to replace it with locks that protect individual resources, which will allow a much greater degree of parallelism for both single-processor and multi-processor machines.

Graphical User Interface	A system where the user and computer interact with graphics.
--------------------------	--

H

HTML ## HyperText Markup Language.

HUP ## [HangUp](#).

HangUp

HyperText Markup Language The markup language used to create web pages.

I

I/O ## [Input/Output](#).

IASL ## [Intel's ASL compiler](#).

IMAP ## [Internet Message Access Protocol](#).

IP ## [Internet Protocol](#).

IPFW ## [IP Firewall](#).

IPP ## [Internet Printing Protocol](#).

IPv4 ## [IP Version 4](#).

IPv6 ## [IP Version 6](#).

ISP ## [Internet Service Provider](#).

IP Firewall

IP Version 4 The IP protocol version 4, which uses 32 bits for addressing. This version is still the most widely used, but it is slowly being replaced with IPv6.
[IP Version 6](#).

IP Version 6 The new IP protocol. Invented because the address space in IPv4 is running out. Uses 128 bits for addressing.

Input/Output

Intel's ASL compiler Intel's compiler for converting ASL into AML.

Internet Message Access
Protocol

Internet Printing Protocol

Internet Protocol The packet transmitting protocol that is the basic protocol on the Internet. Originally developed at

1888

the U.S. Department of Defense and an extremely important part of the TCP/IP stack. Without the Internet Protocol, the Internet would not have become what it is today. For more information, see [RFC 791](#).

Internet Service Provider

A company that provides access to the Internet.

K

KAME

Japanese for “turtle”, the term KAME is used in computing circles to refer to the [KAME Project](#), who work on an implementation of IPv6.

KDC

[Key Distribution Center](#).

KLD

[Kernel ld\(1\)](#).

KSE

[Kernel Scheduler Entities](#).

KVA

[Kernel Virtual Address](#).

Kbps

[Kilo Bits Per Second](#).

Kernel [ld\(1\)](#)

Kernel Scheduler Entities

A kernel-supported threading system. See the [project home page](#) for further details.

Kernel Virtual Address

Key Distribution Center

Kilo Bits Per Second

Used to measure bandwidth (how much data can pass a given point at a specified amount of time). Alternates to the Kilo prefix include Mega, Giga, Tera, and so forth.

L

LAN

[Local Area Network](#).

LOR

[Lock Order Reversal](#).

LPD

[Line Printer Daemon](#).

Line Printer Daemon

Local Area Network A network used on a local area, e.g. office, home, or so forth.

Lock Order Reversal The FreeBSD kernel uses a number of resource locks to arbitrate contention for those resources. A run-time lock diagnostic system found in FreeBSD-CURRENT kernels (but removed for releases), called [witness\(4\)](#), detects the potential for deadlocks due to locking errors. ([witness\(4\)](#) is actually slightly conservative, so it is possible to get false positives.) A true positive report indicates that “if you were unlucky, a deadlock would have happened here”.

True positive LORs tend to get fixed quickly, so check <http://lists.FreeBSD.org/mailman/listinfo/freebsd-current> and the [LORs Seen](#) page before posting to the mailing lists.

M

MAC ## [Mandatory Access Control](#).

MADT ## [Multiple APIC Description Table](#).

MFC ## [Merge From Current](#).

MFP4 ## [Merge From Perforce](#).

MFS ## [Merge From Stable](#).

MIT ## [Massachusetts Institute of Technology](#).

MLS ## [Multi-Level Security](#).

MOTD ## [Message Of The Day](#).

MTA ## [Mail Transfer Agent](#).

MUA ## [Mail User Agent](#).

Mail Transfer Agent An application used to transfer email. An MTA has traditionally been part of the BSD base system. Today Sendmail is included in the base system, but there are many other MTAs, such as postfix, qmail and Exim.

Mail User Agent An application used by users to display and write email.

Mandatory Access Control

Massachusetts Institute of Technology

Merge From Current MFC ##### “Merged From -CURRENT” #####
CVS logs #### ##### -CURRENT #####(### -
STABLE)# patch ####

Merge From Perforce To merge functionality or a patch from the Perforce
repository to the -CURRENT branch.
[Perforce](#).

Merge From Stable In the normal course of FreeBSD development, a
change will be committed to the -CURRENT branch
for testing before being merged to -STABLE. On rare
occasions, a change will go into -STABLE first and
then be merged to -CURRENT.

This term is also used when a patch is merged from
-STABLE to a security branch.
[Merge From Current](#).

Message Of The Day A message, usually shown on login, often used to
distribute information to users of the system.

Multi-Level Security

Multiple APIC Description Table

N

NAT ## [Network Address Translation](#).

NDISulator ## [Project Evil](#).

NFS ## [Network File System](#).

NTFS ## [New Technology File System](#).

NTP ## [Network Time Protocol](#).

Network Address Translation

Network File System

New Technology File System A filesystem developed by Microsoft and available
in its “New Technology” operating systems, such as
Windows® 2000, Windows NT® and Windows® XP.

Network Time Protocol

O

OBE [## Overtaken By Events.](#)

ODMR [## On-Demand Mail Relay.](#)

OS [## Operating System.](#)

On-Demand Mail Relay

Operating System A set of programs, libraries and tools that provide access to the hardware resources of a computer. Operating systems range today from simplistic designs that support only one program running at a time, accessing only one device to fully multi-user, multi-tasking and multi-process systems that can serve thousands of users simultaneously, each of them running dozens of different applications.

Overtaken By Events Indicates a suggested change (such as a Problem Report or a feature request) which is no longer relevant or applicable due to such things as later changes to FreeBSD, changes in networking standards, the affected hardware having since become obsolete, and so forth.

P

p4 [## Perforce.](#)

PAE [## Physical Address Extensions.](#)

PAM [## Pluggable Authentication Modules.](#)

PAP [## Password Authentication Protocol.](#)

PC [## Personal Computer.](#)

PCNSFD [## Personal Computer Network File System Daemon.](#)

PDF [## Portable Document Format.](#)

PID [## Process ID.](#)

POLA [## Principle Of Least Astonishment.](#)

POP	## Post Office Protocol .
POP3	## Post Office Protocol Version 3 .
PPD	## PostScript Printer Description .
PPP	## Point-to-Point Protocol .
PPPoA	## PPP over ATM .
PPPoE	## PPP over Ethernet .
PPP over ATM	
PPP over Ethernet	
PR	## Problem Report .
PXE	## Preboot eXecution Environment .
Password Authentication Protocol	
Perforce	<p>A source code control product made by Perforce Software which is more advanced than CVS. Although not open source, it use is free of charge to open-source projects such as FreeBSD.</p> <p>Some FreeBSD developers use a Perforce repository as a staging area for code that is considered too experimental for the -CURRENT branch.</p>
Personal Computer	
Personal Computer Network File System Daemon	
Physical Address Extensions	A method of enabling access to up to 64 GB of RAM on systems which only physically have a 32-bit wide address space (and would therefore be limited to 4 GB without PAE).
Pluggable Authentication Modules	
Point-to-Point Protocol	
Pointy Hat	A mythical piece of headgear, much like a dunce cap, awarded to any FreeBSD committer who breaks the build, makes revision numbers go backwards,

or creates any other kind of havoc in the source base. Any committer worth his or her salt will soon accumulate a large collection. The usage is (almost always?) humorous.

Portable Document Format

Post Office Protocol

Post Office Protocol Version 3

PostScript Printer Description

Preboot eXecution Environment

Principle Of Least Astonishment

```
# FreeBSD #####  
##### /etc/defaults/rc.conf #####  
POLA ##### POLA ##  
#####
```

Problem Report

A description of some kind of problem that has been found in either the FreeBSD source or documentation. See [Writing FreeBSD Problem Reports](#).

Process ID

A number, unique to a particular process on a system, which identifies it and allows actions to be taken against it.

Project Evil

The working title for the NDISulator, written by Bill Paul, who named it referring to how awful it is (from a philosophical standpoint) to need to have something like this in the first place. The NDISulator is a special compatibility module to allow Microsoft Windows™ NDIS miniport network drivers to be used with FreeBSD/i386. This is usually the only way to use cards where the driver is closed-source. See `src/sys/compat/ndis/subr_ndis.c` .

R

RA

[Router Advertisement](#).

RAID

[Redundant Array of Inexpensive Disks](#).

RAM

[Random Access Memory](#).

RD

[Received Data](#).

RFC	## Request For Comments.
RISC	## Reduced Instruction Set Computer.
RPC	## Remote Procedure Call.
RS232C	## Recommended Standard 232C.
RTS	## Request To Send.
Random Access Memory	
Received Data	
Recommended Standard 232C	A standard for communications between serial devices.
Reduced Instruction Set Computer	
Redundant Array of Inexpensive Disks	
Remote Procedure Call	
repocopy	## Repository Copy.
Repository Copy	<pre>repocopy("repository copy" ###) ##### CVS repository ##### ### repocopy ##### repository ##### committer ##### cvs add ##### cvs rm ##### ##### (### CVS logs #####)## ##### # FreeBSD ##### #### repository copy #### repository ##### ## repository ##### cvs(1) ##### cvs add# cvs rm#####</pre>
Request For Comments	<p>A set of documents defining Internet standards, protocols, and so forth. See www.rfc-editor.org.</p> <p>Also used as a general term when someone has a suggested change and wants feedback.</p>
Request To Send	
Router Advertisement	

S

SCI	## System Control Interrupt.
SCSI	## Small Computer System Interface.
SG	## Signal Ground.
SMB	## Server Message Block.
SMP	## Symmetric MultiProcessor.
SMTP	## Simple Mail Transfer Protocol.
SMTP AUTH	## SMTP Authentication.
SSH	## Secure Shell.
STR	## Suspend To RAM.
SMTP Authentication	
Server Message Block	
Signal Ground	An RS232 pin or wire that is the ground reference for the signal.
Simple Mail Transfer Protocol	
Secure Shell	
Small Computer System Interface	
Suspend To RAM	
Symmetric MultiProcessor	
System Control Interrupt	

T

TCP	## Transmission Control Protocol.
TCP/IP	## Transmission Control Protocol/Internet Protocol.
TD	## Transmitted Data.

TFTP	## Trivial FTP .
TGT	## Ticket-Granting Ticket .
TSC	## Time Stamp Counter .
Ticket-Granting Ticket	
Time Stamp Counter	A profiling counter internal to modern Pentium® processors that counts core frequency clock ticks.
Transmission Control Protocol	A protocol that sits on top of (e.g.) the IP protocol and guarantees that packets are delivered in a reliable, ordered, fashion.
Transmission Control Protocol/ Internet Protocol	The term for the combination of the TCP protocol running over the IP protocol. Much of the Internet runs over TCP/IP.
Transmitted Data	
Trivial FTP	
U	
UDP	## User Datagram Protocol .
UFS1	## Unix File System Version 1 .
UFS2	## Unix File System Version 2 .
UID	## User ID .
URL	## Uniform Resource Locator .
USB	## Universal Serial Bus .
Uniform Resource Locator	
Unix File System Version 1	
Unix File System Version 2	
Universal Serial Bus	
User ID	A unique number assigned to each user of a computer, by which the resources and permissions assigned to that user can be identified.
User Datagram Protocol	

V

VPN

[Virtual Private Network](#).

Virtual Private Network

####

This book is the combined work of hundreds of contributors to “The FreeBSD Documentation Project”. The text is authored in SGML according to the DocBook DTD and is formatted from SGML into many different presentation formats using Jade, an open source DSSSL engine. Norm Walsh's DSSSL stylesheets were used with an additional customization layer to provide the presentation instructions for Jade. The printed version of this document would not be possible without Donald Knuth's TeX typesetting language, Leslie Lamport's LaTeX, or Sebastian Rahtz's JadeTeX macro package.
